

## **ABSTRACT OF THE DISCLOSURE:**

The present disclosure is an extension bar having at a first end a headblock formed therefor receiving a wrench head and preventing the wrench from moving therethrough when needed, and a head portion with notches is formed thereon for receiving one of both indented openings formed therethrough an adapter being configured therefor receiving a straight wrench, and which is capable of rotating to allow the wrench to loosen or tighten nuts or bolts head in locations where are difficult to reach with the wrench.

A second end of the extension bar is formed so that the user is able to handle the extension bar.
